

The Benefits

Bpack can help your business to:

- Become more efficient
- Enter data only once
- Produce Invoices directly from Docket transactions
- Report and Analyze your business
- Integrate to other business devices and systems

AWARD, the company

AWARD Business Software has produced industrial applications since 1990. We are focused on the design and implementation of a series of products designed, developed and implemented throughout Australia.

We pride ourselves on our software's ability to improve the effectiveness of your operation by minimising data entry and having data integrate and flow to other systems without re-keying.

We have established and enviable position with our customers as a knowledgeable, dependable and committed organization to excellence, providing superior software and services.

Bpack, the product

Bpack is a specifically designed, "Industrial Strength application" for use in Quarries / Tips / Transfer stations, especially where weighbridges are used. The application deals with all of the common business data such as customers, products, trucks and dockets.

Business Operations

Bpack captures detailed transactions rapidly. By setting up customers and products the system deals with the weighing of trucks and production of delivery dockets. The system produces cash or account dockets with specific business rules related to each.

We understand the business operations of industrial businesses and this such as security, pricing and invoicing get detailed attention in the application. The contract pricing section is extremely flexible with contract prices being able to be established for a period of time, for a particular customer (or customer group) and a particular product (or product group). A contract price can then override standard pricing during the creation of dockets.

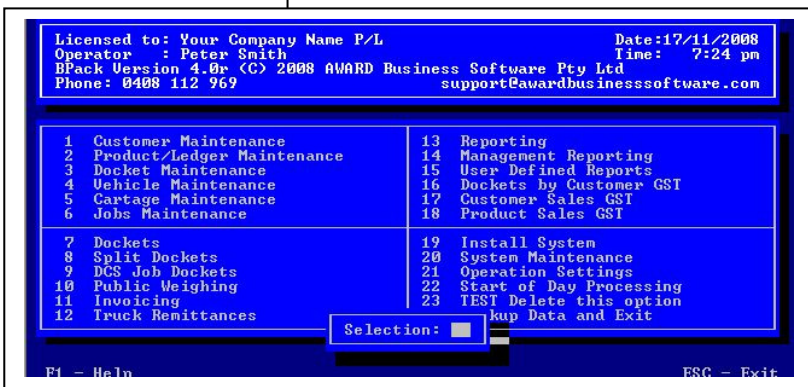

Docket data is then used for generating invoices without the need for any re-keying. "One single source for all data".

AWARD Services

AWARD offers a range of technology and management services. We implement, offer extensive design services and support. We regularly assist companies with problem resolution outside the scope of our original brief. If we cannot directly assist the technology area you are looking for we can put you in touch with an organization that can.

Saving you Money !

We pride ourselves on using the most cost effective and business effective technology to achieve effective results for your business. We are not technology "show ponies". We recommend the most cost effective solutions that provide you with tangible results.

Bpack, the application

Customer Quotes

"We depend on Award Systems every day"

"We rarely need support. The program just keeps running"

"We have less staff and deal with far more customers than we ever have, and no more re-keying of data"

"Having data flow from transactions systems to the Debtors system and GL means far less errors and more productivity for our business"

Meeting your business growth

Bpack is a multi user application designed to run in single or multi-site operations. Head Office control most data with sites having the key tasks of generating dockets. This means that confidential pricing information and other aspects of your business can be managed entirely at head office while site staff perform the process of delivery docket creation.

Bpack is especially easy to use and can be implemented in a matter of days in the majority of businesses. Data validation in the system is significant helping to ensure the quality of data being entered.

Integration and Reporting

Bpack whilst a tremendous data capture tool allows access to data using industry standard data files. Data created in Bpack data can be exported to other standard Windows Applications such as Microsoft SQL, Microsoft Excel, Microsoft Access or any other ODBC compliant tool. This allows you to create your own reports or data analysis using tools that you are familiar with.

- Integrates with weighbridge and other industrial devices such as card readers, bar code readers etc.
- Bpack currently has integration to a number of financial packages and other systems including Enterprise Wide commerce systems for management of debtors/customer lists.
- More than 50 standard reports with numerous data filtering and reporting criteria.
- All reports can be produced to screen / printer / file.

Typical application

Technical Requirements

Minimum Hardware requirements;

- Pentium Based PC, 233 Mhz Processor
- 64Mb RAM
- CD ROM Drive, Backup facilities eg CD Burner, Zip drive
- 1Gb Hard disk space (depends upon your data volume)
- LAN/WAN or other communications methods with sites
- Modems where applicable for remote support and communication with head office.
- In all environments, a minimum of Peer-to-Peer networking, Email and remote support is recommended

Minimum Software Requirements

- Award products conform to all current MS Operating systems including All Versions of Windows Vista, XP, Windows 2000, Windows 9.x,. We have not tested this application under Linux.
