

The Benefits

Cpack can help your business to:

- Become more efficient
- Enter data only once
- Produce Invoices directly from Docket transactions
- Report and Analyze your business
- Integrate to other business devices and systems

AWARD, the company

AWARD Business Software has produced industrial applications since 1990. We are focused on the design and implementation of a series of products designed, developed and implemented throughout Australia.

We pride ourselves on our software's ability to improve the effectiveness of your operation by minimising data entry and having data integrate and flow to other systems without re-keying.

We have established an enviable position with our customers as a knowledgeable, dependable and committed organization to excellence, providing superior software and services.

CPack, the product

Cpack is a specifically designed, "Industrial Strength application" for use in companies performing concrete batching, especially where weighbridges are used. The application deals with all of the common business data such as customers, products, stock control, trucks and dockets.

Business Operations

Cpack captures detailed transactions rapidly. By setting up customers and products the system deals with the batching of concrete loads and production of delivery dockets. The system produces cash or account dockets with specific business rules related to each.

We understand the business operations of industrial businesses and this such as the need for security, flexible pricing and invoice generation get detailed attention in the application. The contract pricing section is extremely flexible with contract prices being able to be established for a period of time, for a particular customer (or customer group) and a particular product (or product group). A contract price can then override standard pricing during the creation of invoices.

Docket data is then used for generating invoices without the need for any re-keying. "One single source for all data".

AWARD Services

AWARD offers a range of technology and management services including implementation, project management, support and extensive design services. If we cannot directly assist the technology area you are looking for we can put you in touch with an organization that can.

Saving you Money !

We pride ourselves on using the most cost effective and business effective technology to achieve effective results for your business. We are not technology "show ponies". We recommend the most cost effective solutions that provide you with tangible results.

Cpack Enterprise, the application

Customer Quotes

"We depend on Award Systems every day"

"We rarely need support. The program just keeps running"

"We have less staff and deal with far more customers than we ever have, and no more re-keying of data"

"Having data flow from transactional systems to the Debtors system and GL means far less errors and more productivity for our business"

Meeting your business growth

Cpack Enterprise comes as multi user application designed to run in multi-site operations. Head Office control most data with sites having the key tasks of generating dockets. Central orders can be performed by head office and delivered by one or more plants. This means that confidential pricing information and other aspects of your business can be managed entirely at head office while site staff perform the process of delivery docket creation.

Cpack is especially easy to use and can be implemented in a matter of days in the majority of businesses. Data validation in the system is significant, helping to ensure a high quality of entered data.

Integration and Reporting

Cpack whilst a tremendous data capture tool allows access to data using industry standard data files. Data created in Cpack data can be exported to other standard Windows Applications such as Microsoft SQL, Microsoft Excel, Microsoft Access or any other ODBC compliant tool. This allows you to create your own reports or data analysis using tools that you are familiar with.

- Cpack currently has integration to a number of financial packages and other systems including Enterprise Wide commerce systems for management of debtors/customer lists.
- More than 20 standard reports with numerous data filtering and reporting criteria.
- All reports can be produced to screen / printer / file.

Typical application

Technical Requirements

Minimum Hardware requirements;

- Pentium Based PC
- 256Mb RAM
- CD ROM Drive, Backup facilities eg CD Burner, Zip drive, USB Drive
- At least 250Mb Hard disk space (depends upon your data volume)
- VPN/WAN/ADSL or other communications methods with sites
- Modems where no other communications infrastructure is in place for remote support and communication with head office.
- In all environments, a minimum of Peer-to-Peer networking, Email and remote support is recommended

Minimum Software Requirements

- Award products can be run on current Microsoft Operating systems including Windows Vista, Windows XP, Windows 2000 and Windows 9.x. We have not tested this application under Linux.
